Perci Wolday

469-360-6158 | perciwolday2@gmail.com | linkedin.com/in/PerciWolday | github.com/PerciWolday | Portfolio

Education

University of Illinois Chicago | Chicago, IL — May 2027
Bachelor of Science in Mathematics and Computer Science — *GPA: 3.9*

Technical Skills

Languages: Python, SQL, Java, C++, TypeScript **ML & Data:** PyTorch, NumPy, pandas, OpenCV, PIL, QuTiP
Tools: Docker, Git, AWS, Azure, Databricks, Power BI, Vercel, OpenAI API, Whisper

Experience

Machine Learning Researcher | MSCS Undergraduate Research Laboratory — Aug 2026 – Present

- Trained a PyTorch CNN to classify handwritten characters across 47 EMNIST classes, with 94% test accuracy.
- Used OpenCV, PIL, and skeletonization to reduce differences in stroke thickness between writing samples.
- Tested 20–30 real handwriting samples and analyzed errors to guide improvements to the preprocessing pipeline.

Software Engineering Intern | Kadeya — Feb 2026 – May 2026

- Engineered Python ETL pipelines ingesting Nayax payment API data with backoff retry logic for reliability.
- Built relational schemas with SQL indexing for time-series sensor data, reducing query response time by 10%.
- Analyzed sensor logs with SQL and pandas to identify anomalies and recurring system failure patterns.

Founder & President | Girls Who Code, Alma College Chapter — Oct 2024 – Dec 2025

- Founded chapter in Alma College, grew it to 30+ members and led weekly code review sessions.
- Guided members through 5+ team projects, including a Generative AI initiative where members built 3+ Python-based LLM applications utilizing GPT APIs and prompt engineering to solve domain-specific tasks.

Computer Science Researcher | Osgood Center — Jun 2025 – Aug 2025

- Developed Python-based fairness evaluation tools to detect and quantify bias patterns across demographic groups.
- Evaluated AI systems against governance and compliance frameworks to identify technical risks.
- Generated structured AI risk reports that translated model findings into actionable recommendations.

Projects

AI Call Intelligence & CRM Assistant | *Python, FastAPI, React, Whisper, OpenAI API* — Aug 2026

- Built a full-stack platform that transcribes calls at 93% accuracy and generates key points and action items.
- Extracted customer details, call reasons, follow-ups, and other structured CRM data from conversations.
- Built AI search across transcripts and CRM data to retrieve customer history and conversation context.

Correspond | *Python, QuTiP, NumPy, PyTorch, React* — July 2026

- Trained a PyTorch model on QuTiP simulation data to predict quantum behavior from classical trajectories.
- Built a React interface to compare classical simulations, quantum results, and ML predictions.
- Deployed the full-stack app on Vercel with GitHub auto-builds, enabling public access to live simulations.

Awards & Leadership

- Illinois Zeta Scholar | Tau Beta Pi Engineering Society — January 2026
- 1st Place in Programming Language Concepts | BPA Regional Conference — February 2025
